(a) small reductions: ratio saturates at $1/\varphi_{\max}$
$1/\varphi_{\max} = 707$
KL / minimum KL
10^0
10^1
10^2
10^{-7}
10^{-6}
10^{-5}
10^{-4}
10^{-3}
10^{-2}
10^{-1}
total reduction $D = p - \varepsilon$
(b) all 244 runs, 8 systems; Spearman 0.80
fixed budget
always-feasible budget
fixed multiplier
KL / minimum KL (exact)
10^0
10^1
dispersion of implied multipliers, $1 + \mathrm{CV}^2$
fixed budget: exact
fixed budget: $1 + \mathrm{CV}^2$
always-feasible budget: exact
always-feasible budget: $1 + \mathrm{CV}^2$
fixed multiplier: exact
