(a) small reductions: law becomes exact
KL / minimum KL
$10^2$
$10^1$
$10^0$
$10^{-3}$
$10^{-2}$
$10^{-1}$
total reduction $D = p - \varepsilon$
(b) all 244 runs, 8 systems; Spearman 0.82
fixed budget
always-feasible budget
fixed multiplier
KL / minimum KL (exact)
$10^1$
$10^0$
$10^0$
$10^1$
dispersion of implied multipliers, $1 + \mathrm{CV}^2$
fixed budget: exact
fixed budget: $1 + \mathrm{CV}^2$
always-feasible budget: exact
always-feasible budget: $1 + \mathrm{CV}^2$
fixed multiplier: exact
